

After going to nursing school for several years, Sarah got a job at the children's hospital and sees many different children each day. This is the job she has always wanted. Almost every single day Sarah feels good and generally experiences a lot of pleasant emotions. In fact, it is very rare that she would ever feel negative emotions like sadness or loneliness. When Sarah thinks about her life, she always comes to the same conclusion: she feels highly satisfied with the way she lives.

The reason Sarah feels this way is that she tries to help the sick children by giving them medicine that tastes like candy.

The reason Sarah feels this way is that she tries to poison the sick children by giving them pesticides that taste like candy.

Ten years after Sarah died, a new medical discovery was made which suggested that the medicine had made some of the children less sick.

Ten years after Sarah died, a new medical discovery was made which suggested that the medicine had made some of the children more sick
